## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Puya Partow-Navid on May 12, 2009.

The application has been amended as follows:

1. (Currently Amended) A mode switching method in a mobile communication system, the method comprising:

providing a mode switching start point between an uplink signal and a downlink signal of a transceiver, wherein providing the mode switching start point comprises determining a mode switching time (MST) of the transceiver, determining a minimum guard period (GP<sub>min</sub>) of the transceiver, and determining if the MST is greater than the GP<sub>min</sub>;  
resetting the mode switching start point based on length of a guard period provided between the uplink signal and the downlink signal, wherein the length of the guard period provided between the uplink and the downlink signal is variable with respect to a previous length of a guard period provided between a previous uplink and downlink signal, wherein resetting the mode switching start point comprises determining an advancing time offset ( $\Delta t$ ) based on the minimum guard period (GP<sub>min</sub>), and setting the mode switching start point before a start point of the minimum guard period (GP<sub>min</sub>) of the transceiver if the MST is greater than the GP<sub>min</sub>; and starting mode switching at the mode switching start point.

10. (Currently Amended) A mode switching method comprising:

providing a mode switching start point between an uplink signal and a downlink signal of a transceiver;

determining an advancing time offset ( $\Delta t$ ) based on a minimum guard period ( $GP_{min}$ ),  
~~wherein the  $GP_{min}$  provided between the uplink and the downlink signal is variable with respect to a previous  $GP_{min}$  provided between a previous uplink and downlink signal;~~

setting the mode switching start point before a start point of the  $GP_{min}$  of the transceiver based on a mode switching signal;

starting mode switching at the mode switching start point;

determining a mode switching time (MST) of the transceiver;

determining whether the MST is greater than the  $GP_{min}$ ; and

setting the mode switching start point before the start point of the  $GP_{min}$  of the transceiver if the MST is greater than the  $GP_{min}$ , wherein

determining the mode switching start point reset, if the MST is greater than the  $GP_{min}$ .

11. (Currently Amended) A mode switching system in a mobile communication system comprising:

means for providing a mode switching start point between an uplink signal and a downlink signal of a transceiver, wherein providing the mode switching start point comprises:

determining a mode switching time (MST) of the transceiver,

determining a minimum guard period ( $GP_{min}$ ) of the transceiver, and

determining whether the MST is greater than the  $GP_{min}$ ;

means for resetting the mode switching start point based on length of a guard period provided between the uplink signal and the downlink signal, wherein the length of the guard period provided between the uplink and the downlink signal is variable with respect to a previous length of a guard period provided between a previous uplink and downlink signal, wherein  
resetting the mode switching start point comprises determining an advancing time offset ( $\Delta t$ )  
based on the minimum guard period ( $GP_{min}$ ), and setting the mode switching start point before a

start point of the minimum guard period (GP<sub>min</sub>) of the transceiver if the MST is greater than the GP<sub>min</sub>; and

means for starting mode switching at the mode switching start point.

19. (Currently Amended) The system of claim [[18]] 14, where the means for starting mode switching further performs comprising performing mode switching based on the mode switching start point.

20. (Currently Amended) A mode switching system comprising:

means for providing a mode switching start point between an uplink signal and a downlink signal of a transceiver;

means for determining an advancing time offset ( $\Delta t$ ) based on a minimum guard period (GP<sub>min</sub>), wherein the GP<sub>min</sub> provided between the uplink and the downlink signal is variable with respect to a previous GP<sub>min</sub> provided between a previous uplink and downlink signal;

means for setting the mode switching start point before a start point of the GP<sub>min</sub> of the transceiver based on a mode switching signal;

means for starting mode switching at the mode switching start point;

means for determining a mode switching time (MST) of the transceiver;

means for determining whether the MST is greater than the GP<sub>min</sub>;

means for setting the mode switching start point before the start point of the GP<sub>min</sub> of the transceiver if the MST is greater than the GP<sub>min</sub>; and

means for determining the mode switching start point reset, if the MST is greater than the GP<sub>min</sub>.

#### *Allowable Subject Matter*

2. Claims 1, 4-5, 9-11, 14-15 and 19-20 are allowed.

The following is an examiner's statement of reasons for allowance:

Art Unit: 2618

As explained in applicant's REMARKS filed on 02/12/2009, Na and Soulabil et al. do not sufficiently teach the amended claims. No prior art has been found to teach the details in resetting a mode switching start point. Thus, the claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
